

Wikipedia training sweeps: all saved benchmark candidates (1/6)

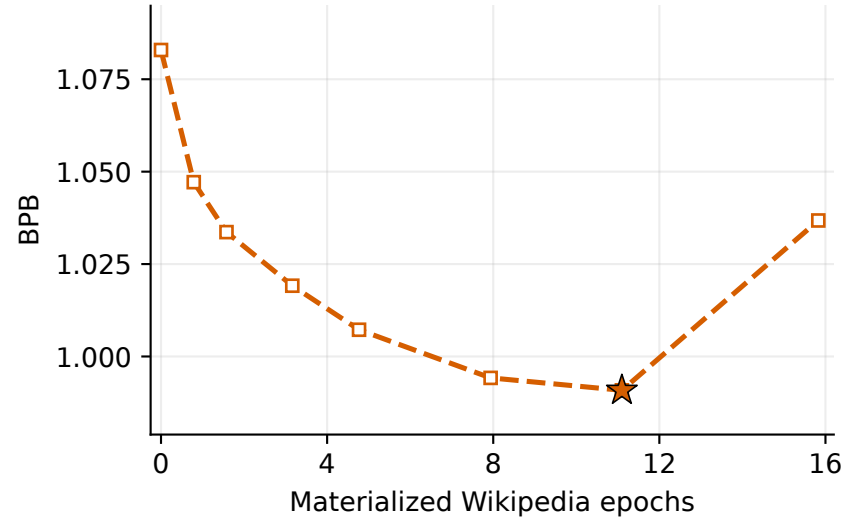

● Simulated-epoching proxy □ Target

Wikipedia English | Same-domain evaluation

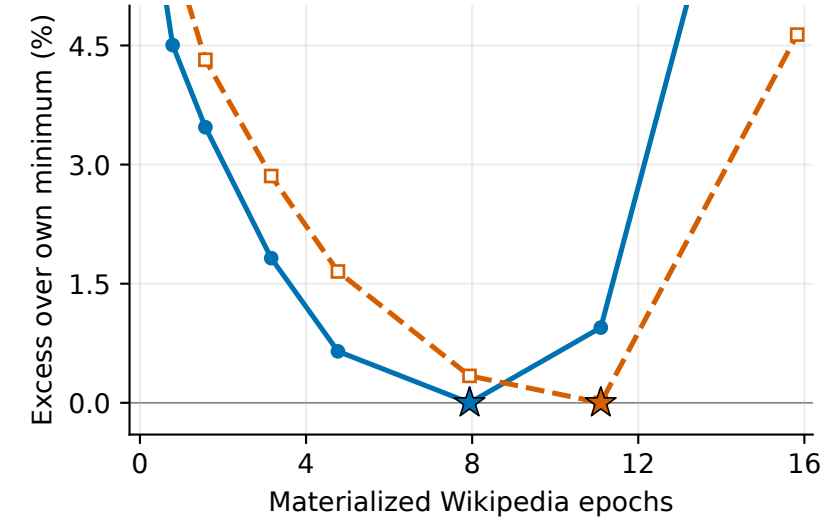

Simulated-epoching proxy: minimum 7.94 epochs

Target: minimum 11.10 epochs

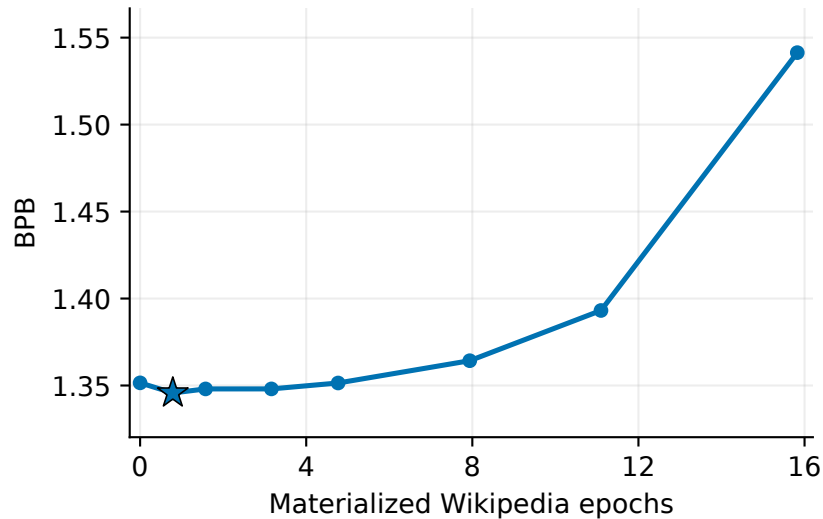

Near the minimum (upper limit 5%)

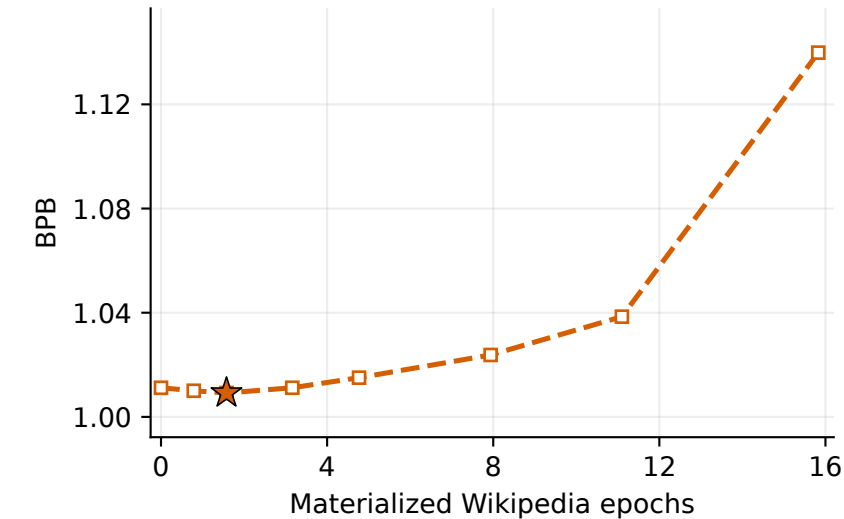

BBC News | Related English prose; news

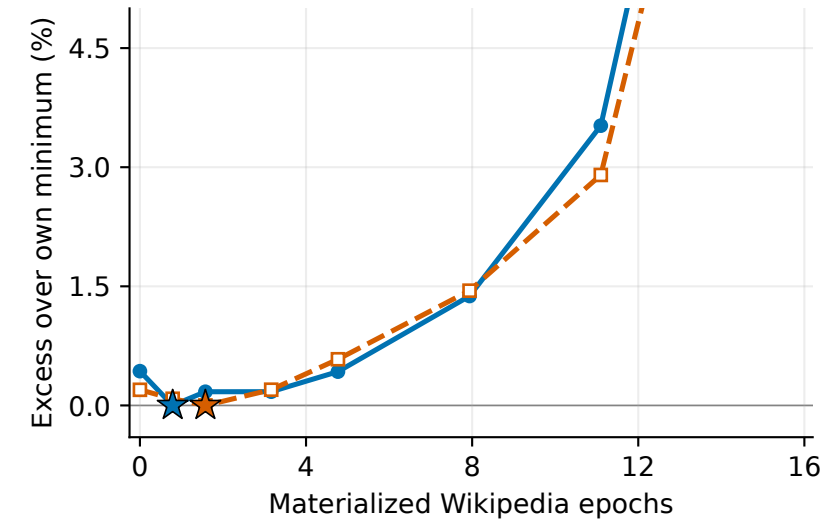

Simulated-epoching proxy: minimum 0.79 epochs

Target: minimum 1.58 epochs

Near the minimum (upper limit 5%)

Left / middle: absolute values, full range. Right: $100 \times (\text{loss} / \text{that curve's minimum} - 1)$; values above 5% are clipped.

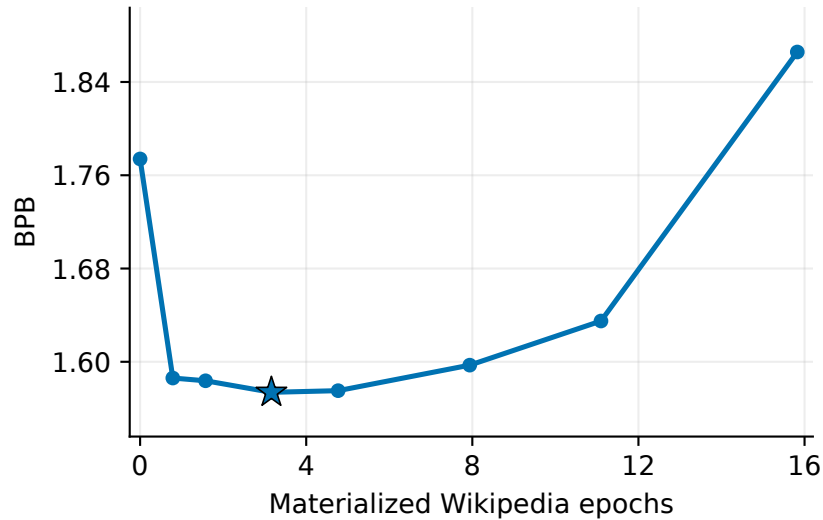

Every measured point is retained. Lines join observations; stars mark grid minima. One trainer seed and one matched subset; no smoothing.

Wikipedia training sweeps: all saved benchmark candidates (2/6)

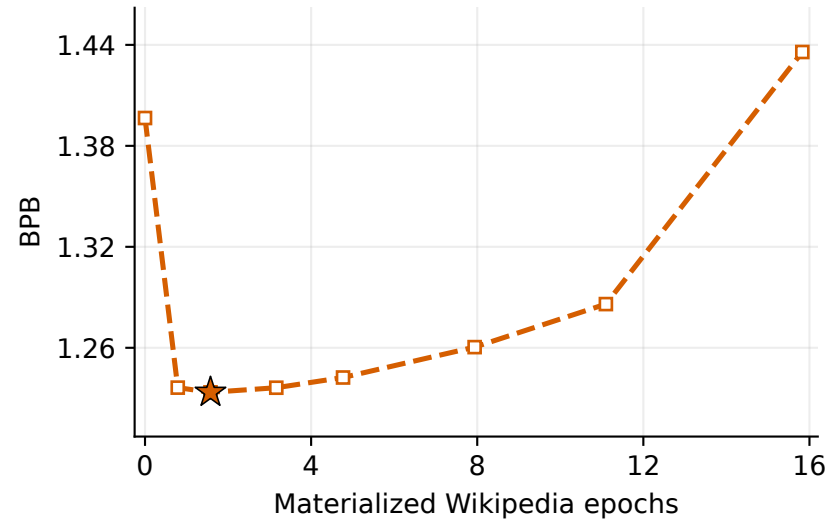

● Simulated-epoching proxy □ Target

AO3 English | Related English prose; fiction

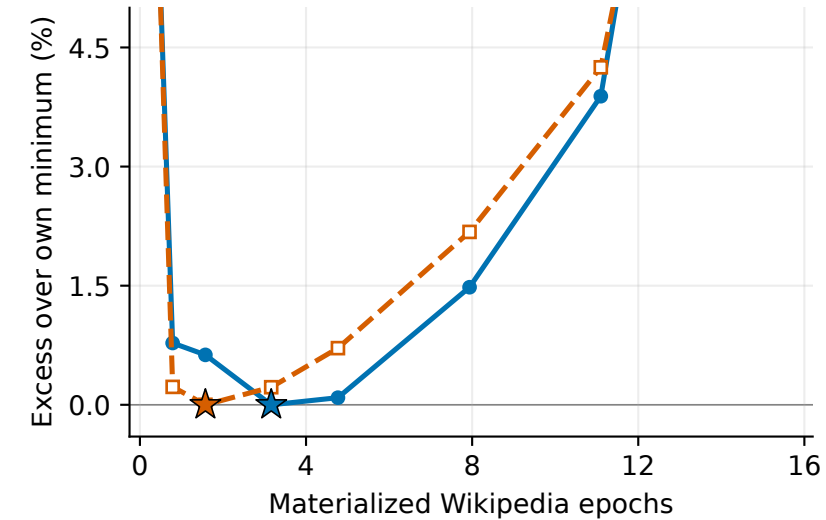

Simulated-epoching proxy: minimum 3.16 epochs

Target: minimum 1.58 epochs

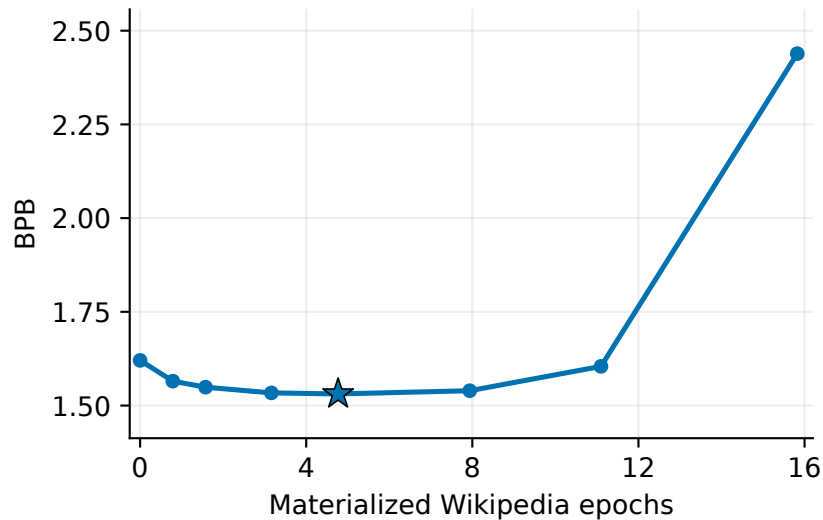

Near the minimum (upper limit 5%)

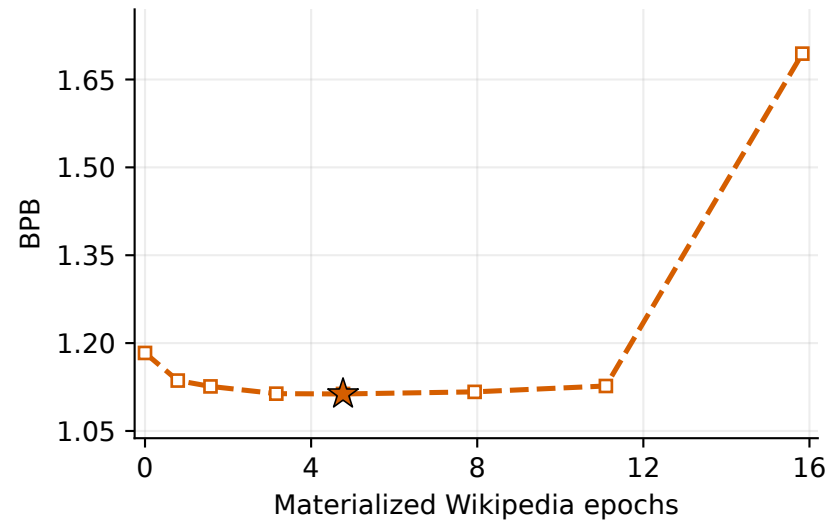

Uncheatable aggregate | Equal mean of all seven components

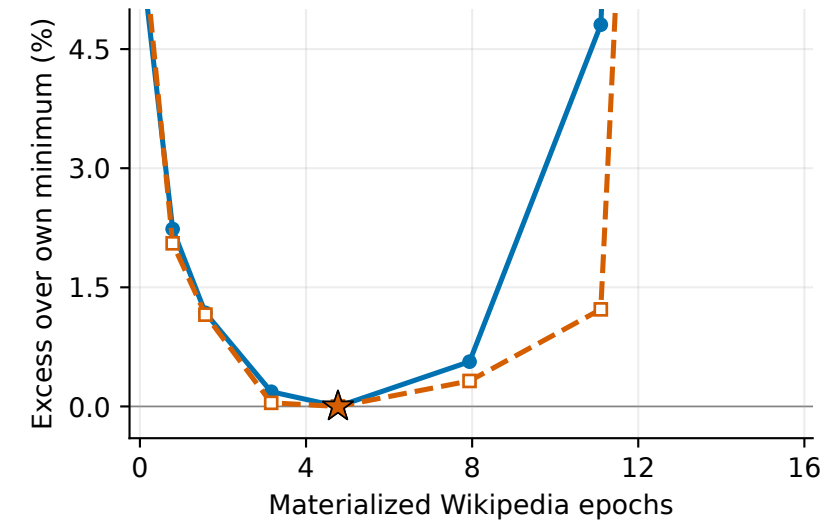

Simulated-epoching proxy: minimum 4.77 epochs

Target: minimum 4.77 epochs

Near the minimum (upper limit 5%)

Left / middle: absolute values, full range. Right: $100 \times (\text{loss} / \text{that curve's minimum} - 1)$; values above 5% are clipped.

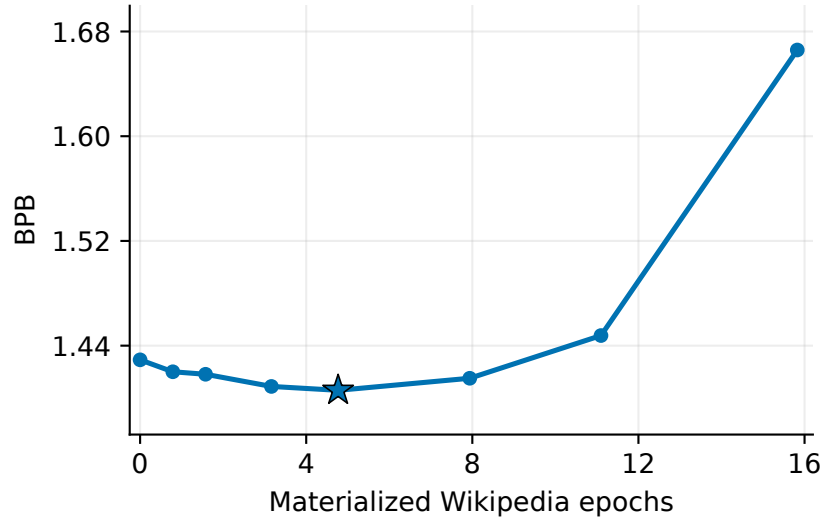

Every measured point is retained. Lines join observations; stars mark grid minima. One trainer seed and one matched subset; no smoothing.

Wikipedia training sweeps: all saved benchmark candidates (3/6)

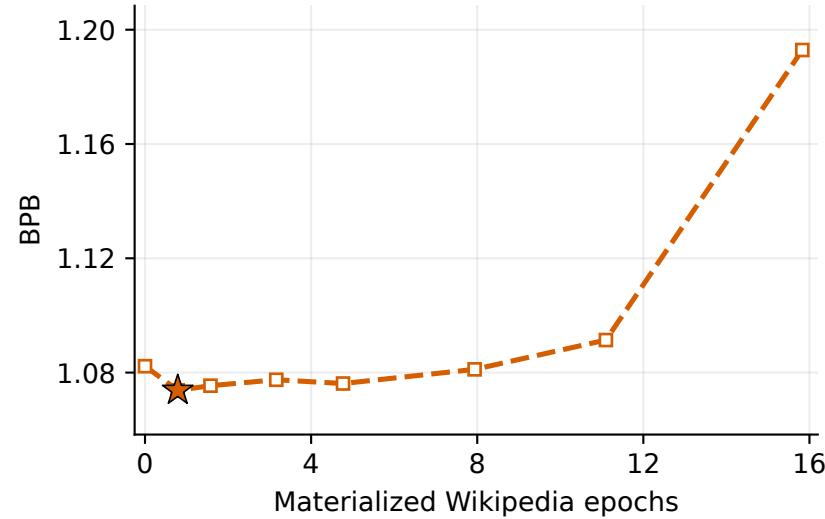

● Simulated-epoching proxy □ Target

arXiv Physics | Scientific prose

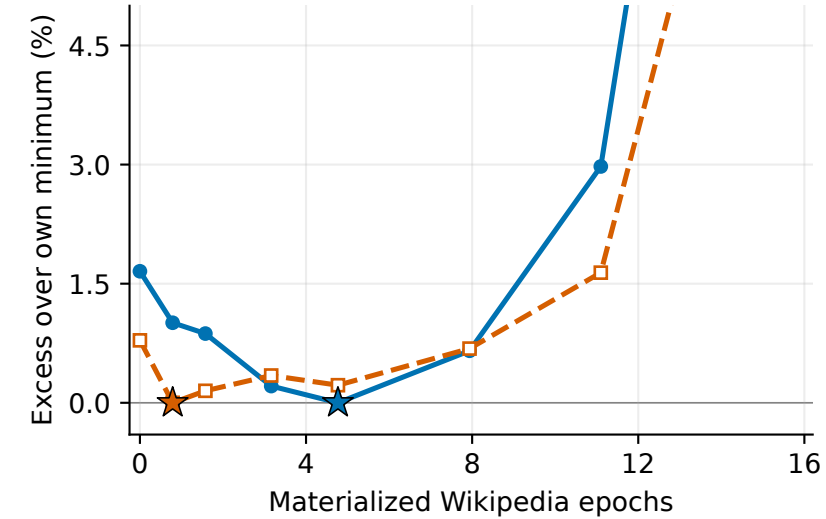

Simulated-epoching proxy: minimum 4.77 epochs

Target: minimum 0.79 epochs

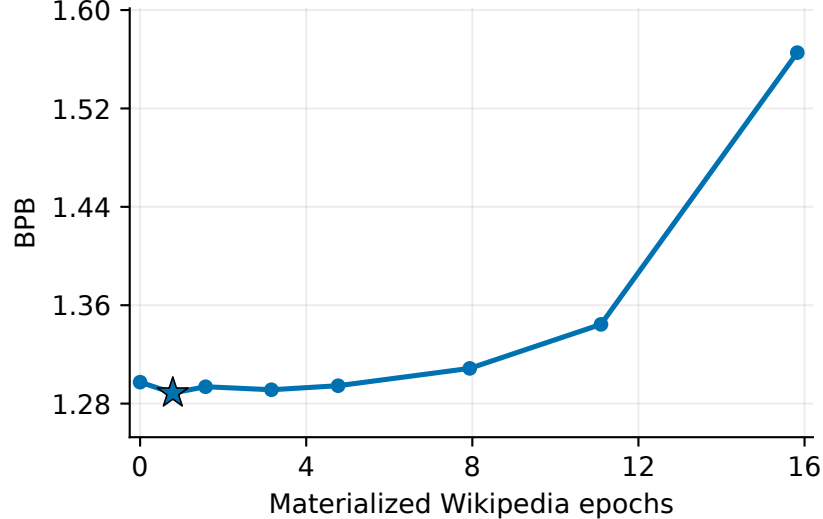

Near the minimum (upper limit 5%)

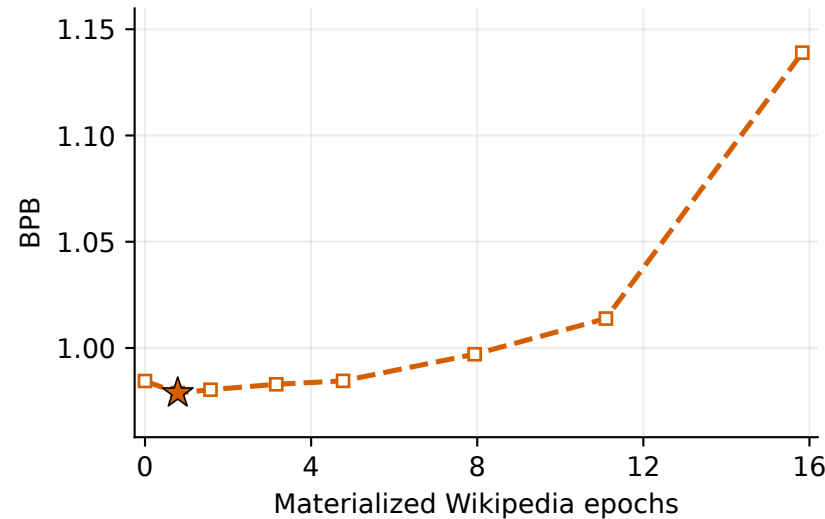

arXiv Computer Science | Scientific prose

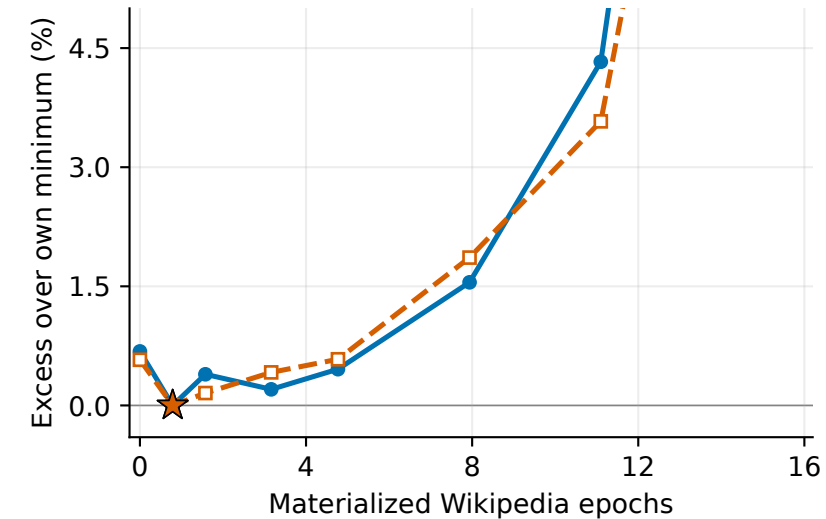

Simulated-epoching proxy: minimum 0.79 epochs

Target: minimum 0.79 epochs

Near the minimum (upper limit 5%)

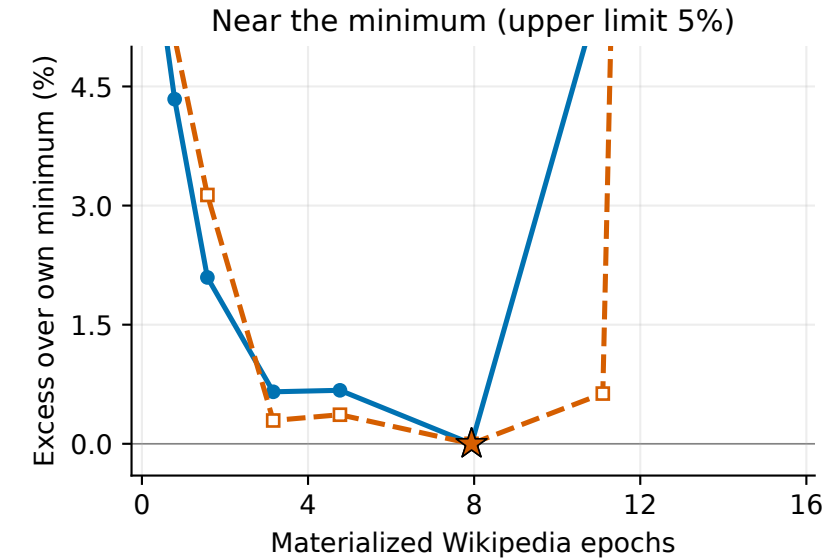

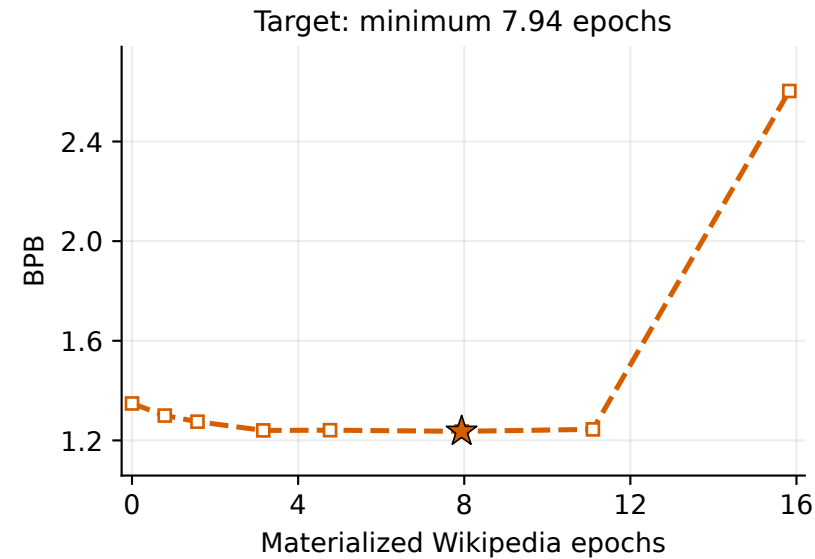

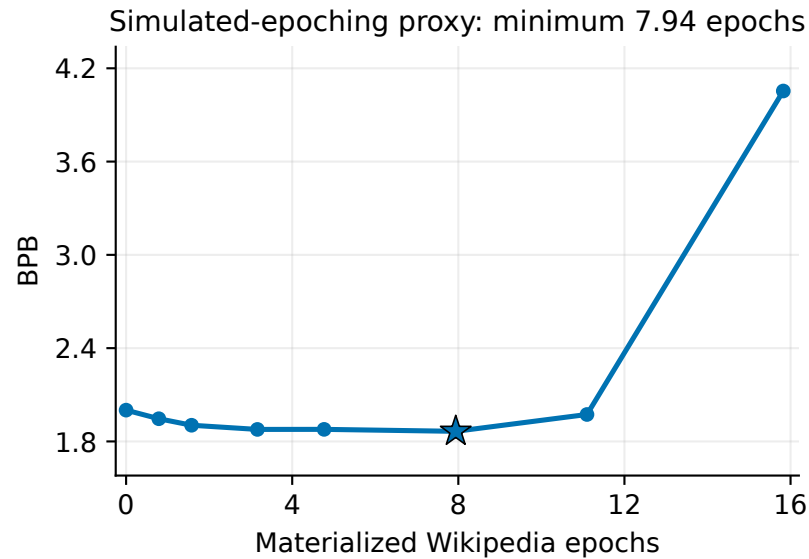

Left / middle: absolute values, full range. Right: $100 \times (\text{loss} / \text{that curve's minimum} - 1)$; values above 5% are clipped.

Every measured point is retained. Lines join observations; stars mark grid minima. One trainer seed and one matched subset; no smoothing.

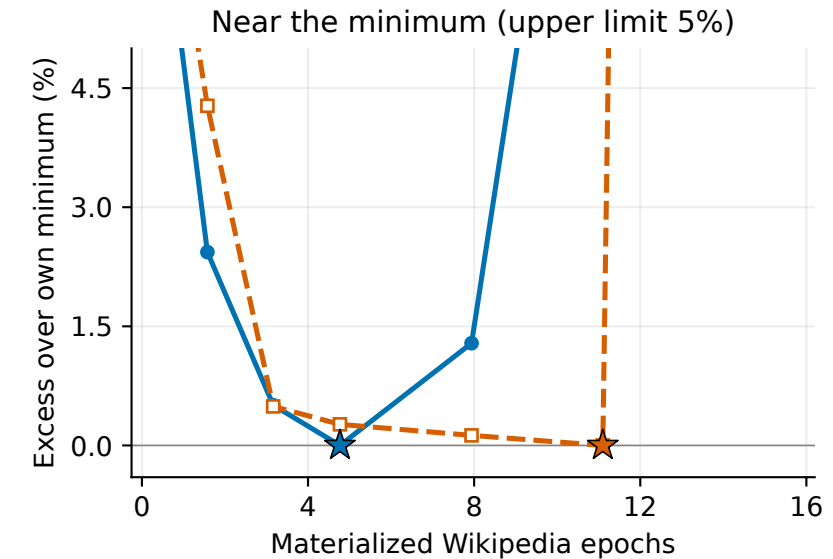

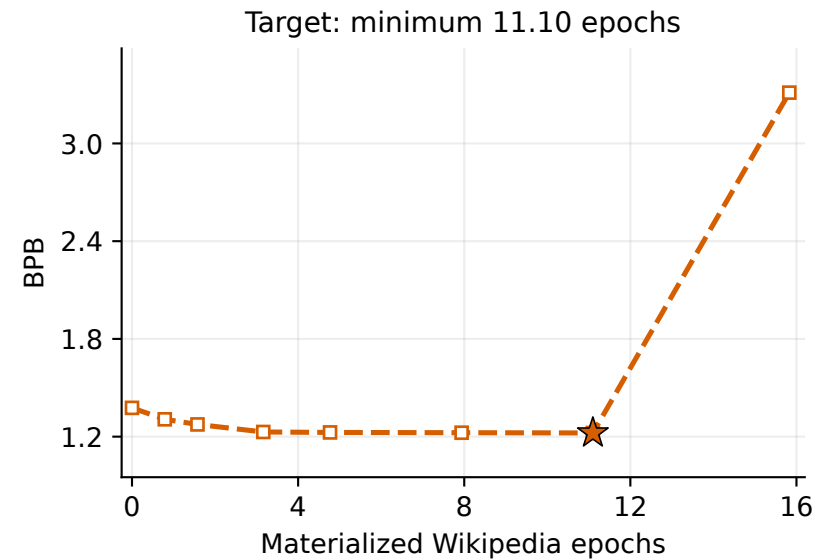

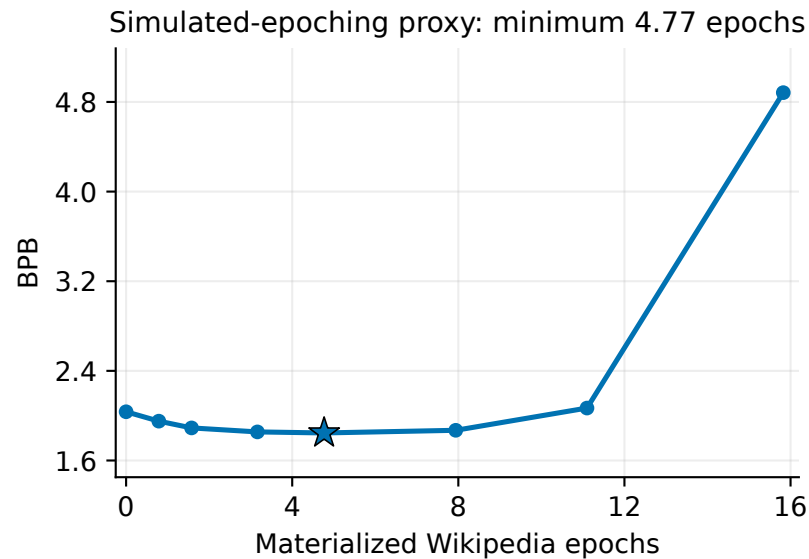

Wikipedia training sweeps: all saved benchmark candidates (4/6)

● Simulated-epoching proxy □ Target

GitHub Python | Code; cross-domain diagnostic

GitHub C++ | Code; cross-domain diagnostic

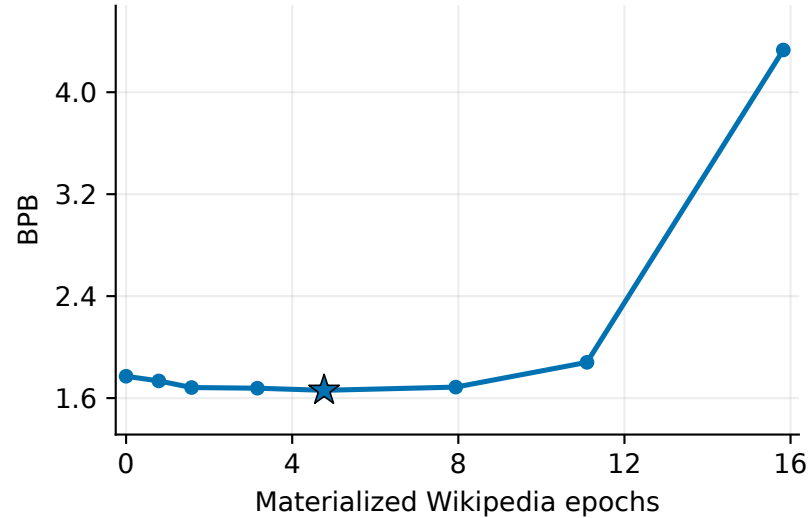

Left / middle: absolute values, full range. Right: $100 \times (\text{loss} / \text{that curve's minimum} - 1)$; values above 5% are clipped.
Every measured point is retained. Lines join observations; stars mark grid minima. One trainer seed and one matched subset; no smoothing.

Wikipedia training sweeps: all saved benchmark candidates (5/6)

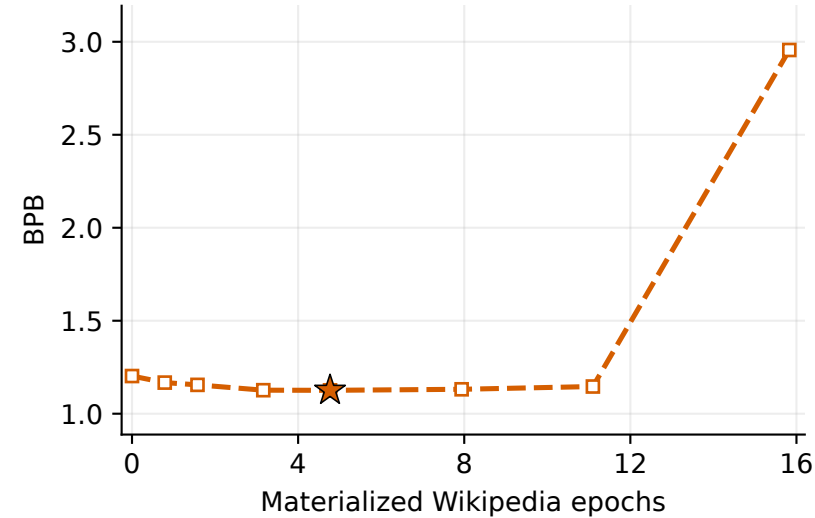

● Simulated-epoching proxy □ Target

PALOMA Programming Languages | Code; cross-domain diagnostic

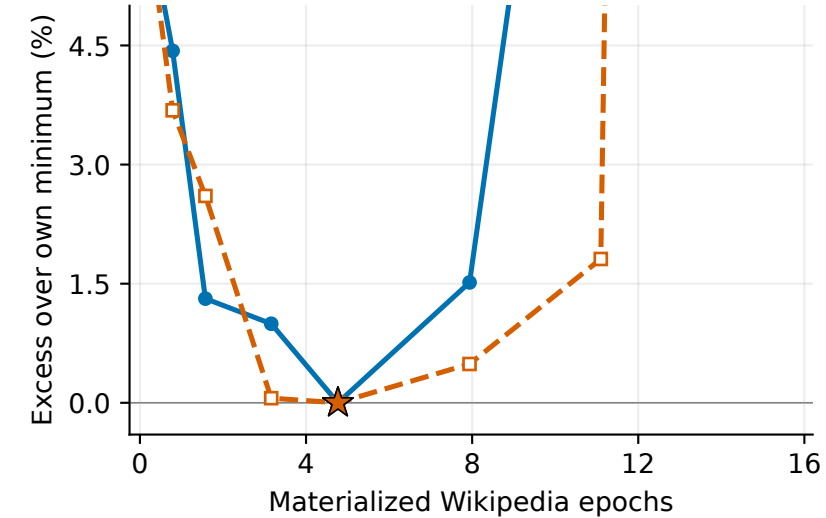

Simulated-epoching proxy: minimum 4.77 epochs

Target: minimum 4.77 epochs

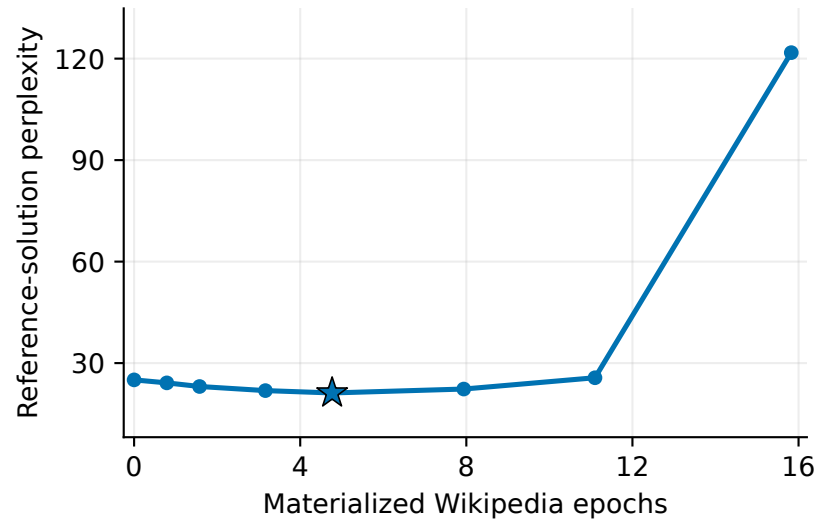

Near the minimum (upper limit 5%)

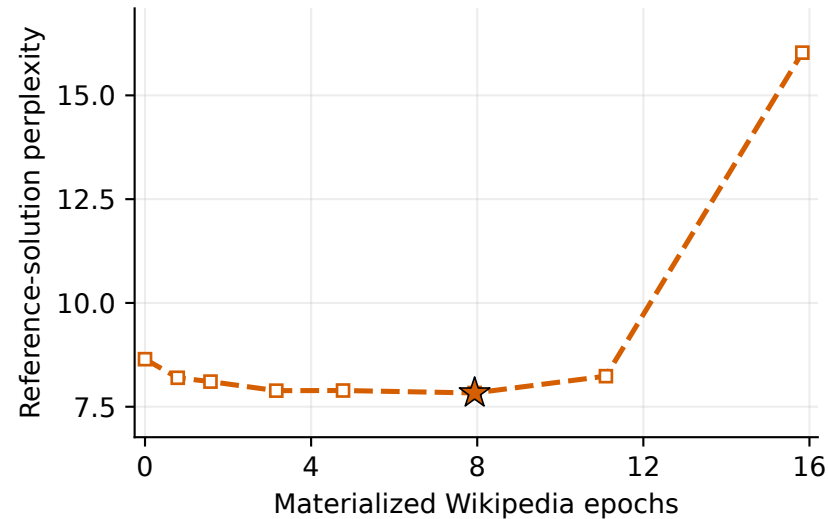

MATH-500 | Reference-solution likelihood

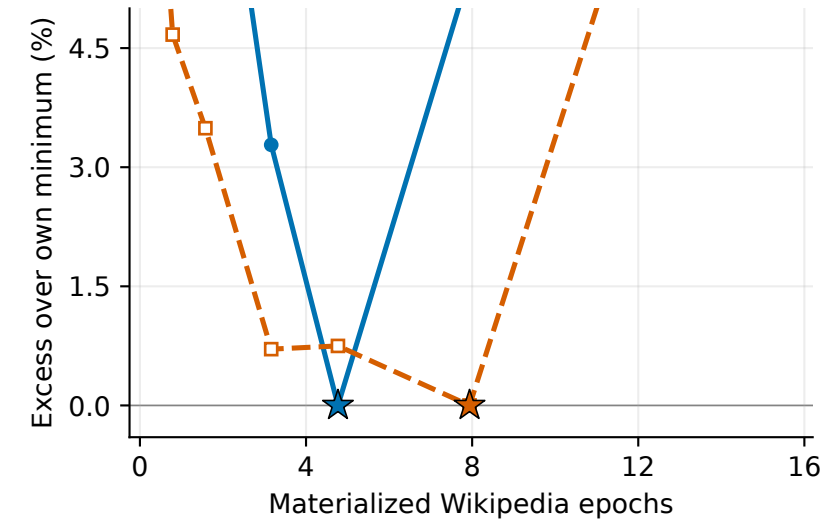

Simulated-epoching proxy: minimum 4.77 epochs

Target: minimum 7.94 epochs

Near the minimum (upper limit 5%)

Left / middle: absolute values, full range. Right: $100 \times (\text{loss} / \text{that curve's minimum} - 1)$; values above 5% are clipped.

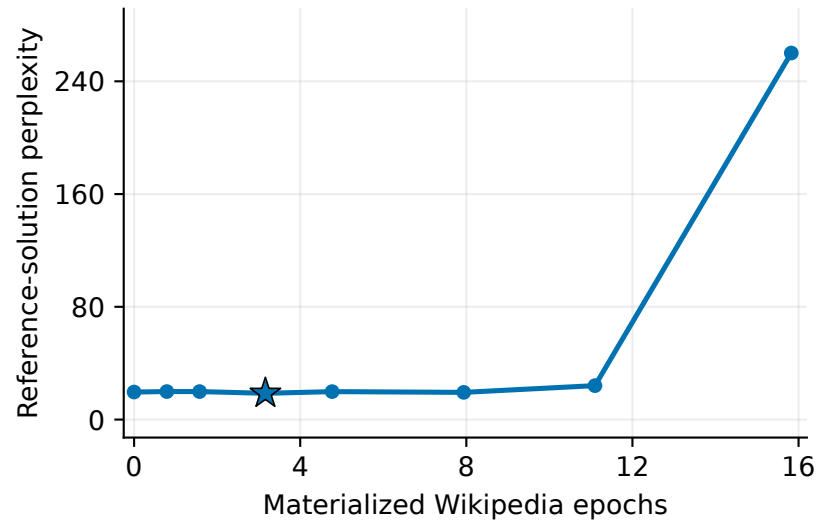

Every measured point is retained. Lines join observations; stars mark grid minima. One trainer seed and one matched subset; no smoothing.

Wikipedia training sweeps: all saved benchmark candidates (6/6)

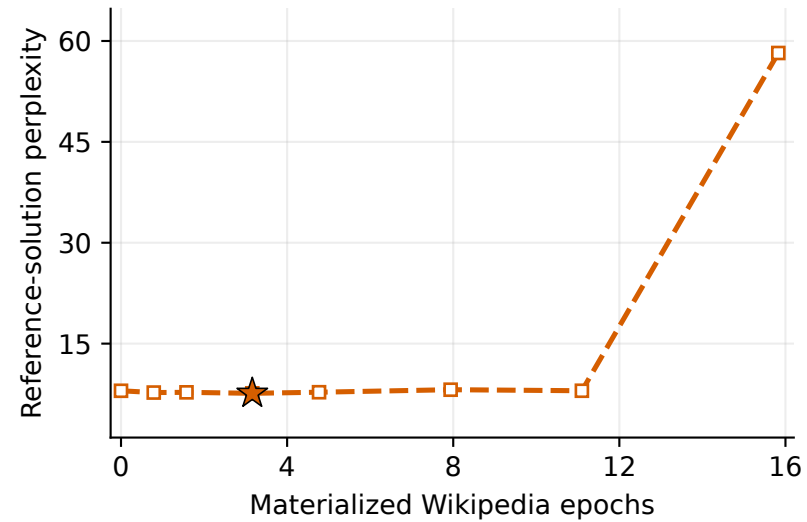

● Simulated-epoching proxy □ Target

GSM8K | Reference-solution likelihood

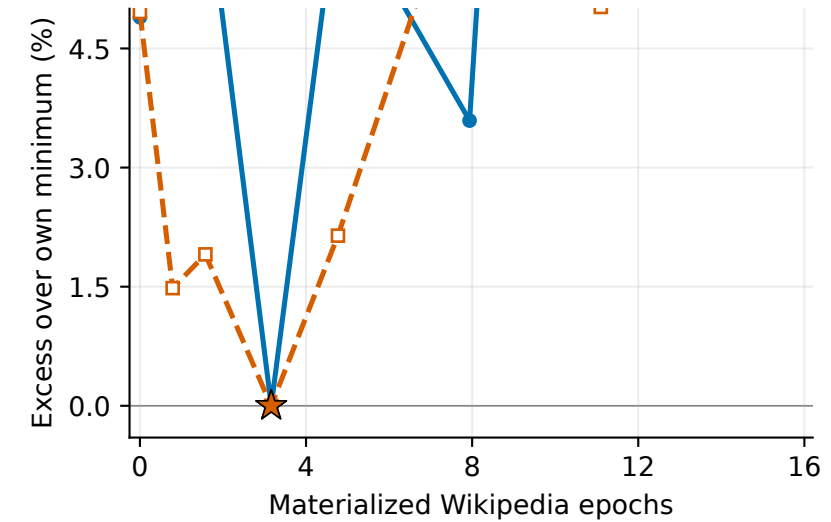

Simulated-epoching proxy: minimum 3.16 epochs

Target: minimum 3.16 epochs

Near the minimum (upper limit 5%)

Left / middle: absolute values, full range. Right: $100 \times (\text{loss} / \text{that curve's minimum} - 1)$; values above 5% are clipped.
Every measured point is retained. Lines join observations; stars mark grid minima. One trainer seed and one matched subset; no smoothing.
